

## README.md

### Setup Procedure

#### Step 1 : Initial Setup

Note: \*You may skip this if you have these dependencies installed already\*

Mac (Homebrew)

```
$ brew install node  
$ brew install npm  
$ brew install git
```

Linux (apt-get)

```
$sudo apt-get install nodejs npm  
$sudo apt-get install git
```

#### Step 2 : Downloading Code Files

Method 1 : GitHub

```
$ git clone https://github.com/dilawer11/SFWeb.git
```

Then you have to copy the API keys they are in the USB but were not pushed to GitHub due to security reasons.

Navigate to SFWeb/src/ and copy the entire "firebase" folder to SFWeb/src/ of the git downloaded files.

Method 2 : Copy Files from USB

Copy the folder SFWeb from USB "Code" folder to any place on your local computer and  
you're set

#### Step 3 : Install Dependencies

In the root folder i.e SFWeb/

```
$ npm install
```

Note : \*This might take some time depending on your internet connection and local machine\*

#### Step 4 : Start the Local Server

In the root folder i.e SFWeb/

```
$ npm run serve
```

Note : \*This might take some time depending on your internet connection and local machine\*

#### Step 5: View the Application

In the last step after starting the server you might get 2 URL links feel free to choose any as both are about the same and copy paste that in your browser and press Enter

#### Step 6 : (Optional) View the Admin Panel

In the URL bar which might look something like "<http://localhost:8080>" type in "admin" at the end e.g "http:localhost:8080/admin" and you will see a login screen

The credentials are

[surgicalfibre@gmail.com](mailto:surgicalfibre@gmail.com)
